List of Figures

Figure 1.1: Structure of retail chain stores that is supported by ODDS-RCS .......... 2

Figure 2.1: Generation of e-commerce development ................................................. 19

Figure 2.2: Category of website through business ..................................................... 20

Figure 2.3: IBM web Site .......................................................................................... 42

Figure 2.4: Wal-Mart web Site ................................................................................... 44

Figure 3.1: The evolutionary prototyping for an online decision support system

for retail chain stores (EP for ODSS-RCS) ......................................................... 61

Figure 3.2: Requirements analysis and gathering model's through EP ...................... 62

Figure 3.3: System design model's through EP .......................................................... 63

Figure 3.4: Implementing prototype model's through EP ........................................... 64

Figure 3.5: System debugging and testing model's through EP ................................. 65

Figure 3.6: User Evaluation Model for System through EP ....................................... 66

Figure 3.7: Model's Deliver System ....................................................................... 67

Figure 4.1: Percentage of companies that respond to customer’s question

received through e-mail? ....................................................................................... 71

Figure 4.2: Companies that have time-delay in delivering online orders .................... 71

Figure 4.3: Percentage of companies that does not completely deliver the order

that is ordered online ......................................................................................... 72

Figure 4.4: Percentage of companies that apply the concept of decentralization

in decision making in relation to their stores ..................................................... 72

Figure 4.5: Percentage of store managers who can generate reports ......................... 73

Figure 4.6: Percentage of Head office managers who can generate reports ............. 74
Figure 4.7: Percentage of managers of stores and head offices that can generate reports. .......................................................... 74

Figure 4.8: the percentage of companies that are planning to improve their current system. ........................................................................................................ 75

Figure 4.9: Percentages of the way of deliver order and degree of satisfaction. ....... 76

Figure 4.10: Percentage of answers for Yes / No questions. ........................................ 77

Figure 4.11: Percentage of the actual time of customers to get orders and satisfy orders. .................................................................................................................. 90

Figure 4.12: Customer use case diagram........................................................................ 106

Figure 4.13: Store Manager and Staff Use Case Diagram .......................................... 107

Figure 4.14: Store Manager Use Case Diagram ......................................................... 108

Figure 4.15: Store Manager Use Case Diagram ......................................................... 109

Figure 4.16: Store Manager Use Case Diagram ......................................................... 110

Figure 5.1: General model for OPS-DSS .................................................................... 117

Figure 5.2: Organization structure that is supported by ODDS-RCS ............................ 120

Figure 5.3: Activity model shows how the system finds the nearest store(s) that has the customer's product................................................................. 123

Figure 5.4: Represents a subset of store areas and the cost of delivery between them ................................................................................................................. 124

Figure 5.5: Activity model shows how customers buy (check out) from the online shop ........................................................................................................... 127

Figure 5.6: Database of ODSS-RCS .......................................................................... 129

Figure 5.7: ODSS-RCS Architecture .................................................................... 131
Figure 6.1: ODSS-RCS main shop interface ............................................................. 140
Figure 6.2: the web pages to create a customer account in ODSS-RCS. ................. 142
Figure 6.3: the error message that will appear to instruct customers to fill an
important field in registration form....................................................................... 143
Figure 6.4: Customer login page............................................................................ 143
Figure 6.5: Customer views history of orders in ODSS-RCS ................................. 144
Figure 6.6: Customer review of shopping cart in ODSS-RCS ................................. 145
Figure 6.7: Interface for checkout page in ODSS-RCS ........................................ 146
Figure 6.8: Interface of staff login page in ODSS-RCS ........................................... 147
Figure 6.9: Interface for updating the inventory in ODSS-RCS by a store
manager. ................................................................................................................. 148
Figure 6.10: the interface for defining the re-order point for a product in a store..... 149
Figure 6.11: Interface of list of stores that belong to a head office. ....................... 150
Figure 6.12: List of product inventory in a store. ................................................... 151
Figure 6.13: the interface of the list of products that have shortage of stock in a
store ....................................................................................................................... 152
Figure 6.14: The interface of ODSS-RCS options to view customers’ orders......... 153
Figure 6.15: the interface of the view customers’ orders module in ODSS-RCS ...... 154
Figure 6.16: The interface of the customers’ orders in ODSS-RCS, which
displays the list of products that will be sent to the customer from
more than one store ............................................................................................... 155
Figure 6.17: The interface of an invoice for a customer’s order......................... 156
Figure 6.18: The interface for viewing the products’ suppliers in a store in ODSS-RCS ........................................... 157

Figure 6.19: The interface for generating a report of stock vs. re-order point by HO manager ........................................... 158

Figure 6.20: The interface of stock vs. re-order point report. (for store manager) ...... 159

Figure 6.21: The interface to generate performance sales report by HO managers ................................................... 160

Figure 6.22: The interface to generate performance sales report ........................................... 160

Figure 6.23: The interface for view orders status ........................................... 161

Figure 6.24: The interface showing the update of personal staff information through ODSS-RCS ........................................... 162

Figure 6.25: The interface for change staff password module ........................................... 163

Figure 6.26: The Interface for the login page for the administrator ........................................... 164

Figure 6.27: The interface for adding a new product to the online shop site ................. 165

Figure 6.28: The interface for the list of products’ categories in ODSS-RCS ................. 166

Figure 6.29: The interface for deleting a product from ODSS-RCS ........................................... 167

Figure 6.30: The interface for assigning a product to a store in ODSS-RCS ................. 168

Figure 6.31: The interface for selecting a store in ODSS-RCS to delete a product from ........................................... 169

Figure 6.32: The interface for deleting a product from a store in ODSS-RCS .......... 170

Figure 6.33: The interface on how to add a new employee in ODSS-RCS ......... 171

Figure 6.34: The interface for editing an employee information in ODSS-RCS .......... 172

Figure 6.35: The interface for adding a store to a head office in ODSS-RCS ..... 173
Figure 6.36: The interface for entering the cost of delivery for a store in ODSS-RCS. ........................................................ 174

Figure 6.37: Print screen for the request file summary for SSL in ODDS-RCS. ....... 176

Figure 7. 1: Show the stores' data that is entered to ODSS-RCS for testing ........ 190
Figure 7. 2: Show the cost of deliver between stores in KL areas ............... 191
Figure 7. 3 Shows the cost of delivery between stores in Melaka areas .......... 191
Figure 7. 4: Shows the cost of delivery between the stores in Ipoh areas ....... 192
Figure 7.5: Customer's order when a staff of the nearest store in Ipoh 1 views the order in scenario 1................................. 196
Figure 7.6: Customer's order when a staff of Ipoh HO views the order in scenario 1............................................................... 197
Figure 7. 7: Customer's order when a staff of Ipoh 2 store views the order in scenario 2......................................................... 198
Figure 7. 8: shows the customer's order when a staff of Ipoh 1 store views the order in scenario 2.......................................... 198
Figure 7. 9: Customer's order when a staff of Ipoh 2 store views the order in scenario 3............................................................ 199
Figure 7. 10: Customer's order when a staff of Ipoh 1 store views the order in scenario 3....................................................... 199
Figure 7.11: Customer's order when a staff of Bukit Bintang store views the order in scenario 4............................................... 200
Figure 7.12: Customer's order when a staff of Ampang store views the order in scenario 4…………………………………………………………. 201

Figure 7.13: shows the customer's order when a staff of Bangsar store views the order in scenario 4…………………………………………………………. 201

Figure 7.14: shows the customer's order when a staff of KL central store views the order in scenario 4…………………………………………………………. 202

Figure 7.15: Customer's order when a staff of Melaka head office store views the order in scenario 5…………………………………………………………. 203

Figure 7.16: Customer's order when a staff of Melaka Raya store views the order in scenario 5…………………………………………………………. 203

Figure 7.17: shows the customer's order when a staff A’Famosa store views the order in scenario 6…………………………………………………………. 204

Figure 7.18: Customer's order when a Melaka Raya store views the order in scenario 6…………………………………………………………. 205

Figure 7.19: Customer's order when a Bukit Pentang store views the order in scenario 7…………………………………………………………. 206

Figure 7.20: Customer's order when a KL central store views the order in scenario 7…………………………………………………………. 206

Figure 7.21: Encrypted passwords for administrator the DB………………. 208

Figure 7.22: Encrypted passwords for staff in the DB………………. 208

Figure 7.23: Encrypted credit card number in the DB………………. 209

Figure 7.24: A print screen shows that ODSS-RCS implementing SSL…. 210

Figure 7.25: Average of companies’ answers that tested ODSS-RCS ….. 212
